

# PercoHyd<sup>®</sup> 2K WB EP Primer 080

Robust  
waterborne  
epoxy primer  
for excellent  
protection.

# PercoHyd® 2K WB EP Primer 080 Robust waterborne epoxy primer for excellent protection.

High mechanical exposure and an intense use are daily occurrence in an industrial environment. Surfaces need an exceptional protection to look good even after a long period. Axalta Coating Systems has developed a waterborne epoxy primer to achieve just that.

This new waterborne primer is designed for all applications requiring very low volatile organic compound (VOC) emissions without compromising on performance or productivity.

PercoHyd® 2K WB Epoxy Primer 080 is a versatile, environmentally responsible wet-on-wet epoxy primer providing excellent adhesion and high corrosion protection on different substrates, e.g. aluminium and steel. Especially on blasted steel, this primer is at its best thanks to its excellent filling properties.

It offers high productivity in application, fast drying times and exceptional over-spray melt in. Thanks to its outstanding sagging resistance PercoHyd® 2K WB Epoxy Primer 080 is an ideal primer when coating complex shapes with strong overlaps. Wet-on-wet re-coating is another criterion demonstrating its superior performance.

As part of the PercoHyd® system, the primer can be applied with all standard equipment, even electrostatic application, over a wide range of substrates.

---

### Highlights

- Environment-responsible (VOC 120 g/l)
- Excellent corrosion protection
- Superior adhesion on aluminium, blasted steel and non-ferrous metals
- Good filling properties and edge covering
- Wet-on-wet filler
- Suitable for broad range of substrates
- Easy, smooth application with all standard application equipment from conventional to HVLP, high pressure, air-mix, airless and electrostatic application
- Low consumption
- Fast drying
- Robust application
- Outstanding vertical stability
- Colour: beige (CW386)
